*The Original Cuski Kids
Orthopaedic Pillow*

Helping to Eliminate Pins and needles in young children

After nurturing our babies and giving them the best possible start in life why, when they are ready for their first sleep support, do we give them any old pillow to sleep on ? Doing this could cause future neck and back problems leading to sleep deprivation – and not only for your child!

Cuski have developed their first orthopaedic pillow, sized and shaped to give the essential neck support for your growing child. It can help to eliminate future neck and back problems, pain, arthritis and poor blood circulation. It also helps to induce a more restful sleep for your child.

This pillow has been created especially to meet the needs of young children from ages 2 years and upwards. Parents it does make sense to prevent not create future back problems in your children.

The neck with its seven sensitive vertebrae, receives little support from a conventional pillow. Which is often why we tend to try and “scrunch” the pillow in order to get comfortable? But even once a comfortable position has been found; it's difficult to maintain the proper support as the shoulders tend to push the pillow out of place. Children don't know to do this, so with the Cuski pillow made of heat responsive viscos elastic memory foam which has been anatomically designed

- * continuously self adjusts to relieve pressure points,
- * moulds to accommodate growing shoulders and natural curves,
- * keeps the spine correctly aligned, allowing muscles and ligaments to relax,
- * reduces tossing and turning thus creating optimum comfort whilst your child is sleeping.

Start your toddlers on the right track and invest in the Cuski Orthopaedic pillow as the first and only pillow your children will need for their growing years.

When to begin using Pillow

Consensus is that the best time to introduce a pillow is when the child moves from cot to bed.

Memory foam was developed in the early 1970s by NASA to relieve pressure built up from the G-force experienced by astronauts during lift off. Viscos elastic memory foam is now used in many healthcare products and is endorsed by the medical profession, chiropractors and physiotherapists.

Pillow is covered with 100% Cotton knitted protector.

Pillowslip is made with the famous Cuski Comforter Material.

EXTRA PILLOWSLIPS AVAILABLE IN CREAM AND MINT
